

JSON and router help

JSON Formatter is a web-based tool to view, edit, and validate JSON. It has different modes such as a tree editor, a code editor, and a plain text editor.

You can use the editor as a component in your own web application. The library can be loaded as [CommonJS](#) module, AMD module, or as a regular javascript file. Supported browsers: Chrome, Firefox, Safari, Opera, Internet Explorer 9+.

Visit: [JSON formatter](#)

192.168.0.1, 192.168.1.1, 192.168.2.1, 192.168.0.1, 10.0.0.x IP addresses are the default gateway of most routers in the world.

If you have any router issue, visit this website: [192.168.0.1](#). It will help you fix different router issues related to username, password, IP address, setup, etc.

Through this IP address, you can get into the management panel to setup or change your network settings, and somehow, fix a relative's network issues.
