

**Quiz ANSWERS Week 8**  
**ECE 656: Electronic Conduction In Semiconductors**  
Mark Lundstrom  
Purdue University, Fall 2017

- 1) The probability that an electron state is occupied is given by the Fermi function. The probability that a phonon is occupied is given by the Bose-Einstein distribution, which is:

a)  $n_0 = \frac{1}{e^{\hbar\omega/k_B T} + 1}$

**b)  $n_0 = \frac{1}{e^{\hbar\omega/k_B T} - 1}$**

c)  $n_0 = \frac{1}{e^{(\hbar\omega - E_F)/k_B T} + 1}$ .

d)  $n_0 = \frac{1}{e^{(\hbar\omega - E_F)/k_B T} - 1}$

e)  $n_0 = \frac{1}{e^{(\hbar\omega - E_F)/k_B T} - 2}$ .

- 2) What is a plot of  $\hbar\omega(\vec{q})$  vs.  $\vec{q}$  for lattice vibrations called?

- a) The Einstein approximation.  
b) The Debye approximation.  
c) The gray approximation.  
**d) The phonon dispersion.**  
e) The Brillouin zone.

- 3) How can we obtain the phonon group velocity from a plot of  $\hbar\omega(\vec{q})$  vs.  $\vec{q}$ ?

a) The group velocity is  $\vec{v}_g(\vec{q}_0) = \omega(\vec{q})/\vec{q}|_{\vec{q}=\vec{q}_0}$ .

**b) The group velocity is  $\vec{v}_g(\vec{q}_0) = d\omega(\vec{q})/d\vec{q}|_{\vec{q}=\vec{q}_0}$ .**

c) The group velocity is  $\vec{v}_g(\vec{q}_0) = \omega(\vec{q}_0)\vec{q}_0$ .

d) The group velocity is  $\vec{v}_g(\vec{q}_0) = \vec{c}$ .

e) The group velocity is  $\vec{v}_g(\vec{q}_0) = \vec{v}_s$ .

(continued on next page)

- 4) What is the biggest difference between the electron dispersion and the phonon dispersion of a material?
- a) The size in  $q$ -space of the Brillouin zone for phonons is smaller than the Brillouin zone for electrons.
  - b) The size in  $q$ -space of the Brillouin zone for phonons is larger than the Brillouin zone for electrons.
  - c) The bandwidth in energy of the phonon dispersion is much less than the bandwidth of the electron dispersion.**
  - d) The bandwidth in energy of the phonon dispersion is much greater than the bandwidth of the electron dispersion.
  - e) For a given material, the two dispersions are identical.
- 5) Comparing the electrical conductivity to the lattice thermal conductivity, which of the following statements is true?
- a) The electrical conductivity can be positive or negative, but the lattice thermal conductivity is always positive.
  - b) The lattice thermal conductivity varies over many orders of magnitude.
  - c) The electrical conductivity varies over many orders of magnitude.**
  - d) The two are related by the Wiedemann-Franz Law.
  - e) The two are related by the Lorenz number.
