# Single Molecule Recognition Atomic Force Microscopy

Peter Hinterdorfer

*Purdue*  
10-05-2006

# Overview

---

- MACmode AFM Imaging
- Recognition Force Spectroscopy
- Combining Force Spectroscopy with Imaging
- Simultaneously recorded *Topography* and *Recognition* images (*TREC*)
- Summary and Outlook

# MACmode AFM

# AFM Tips and Cantilevers

<http://www.park.com>

# Probability Density

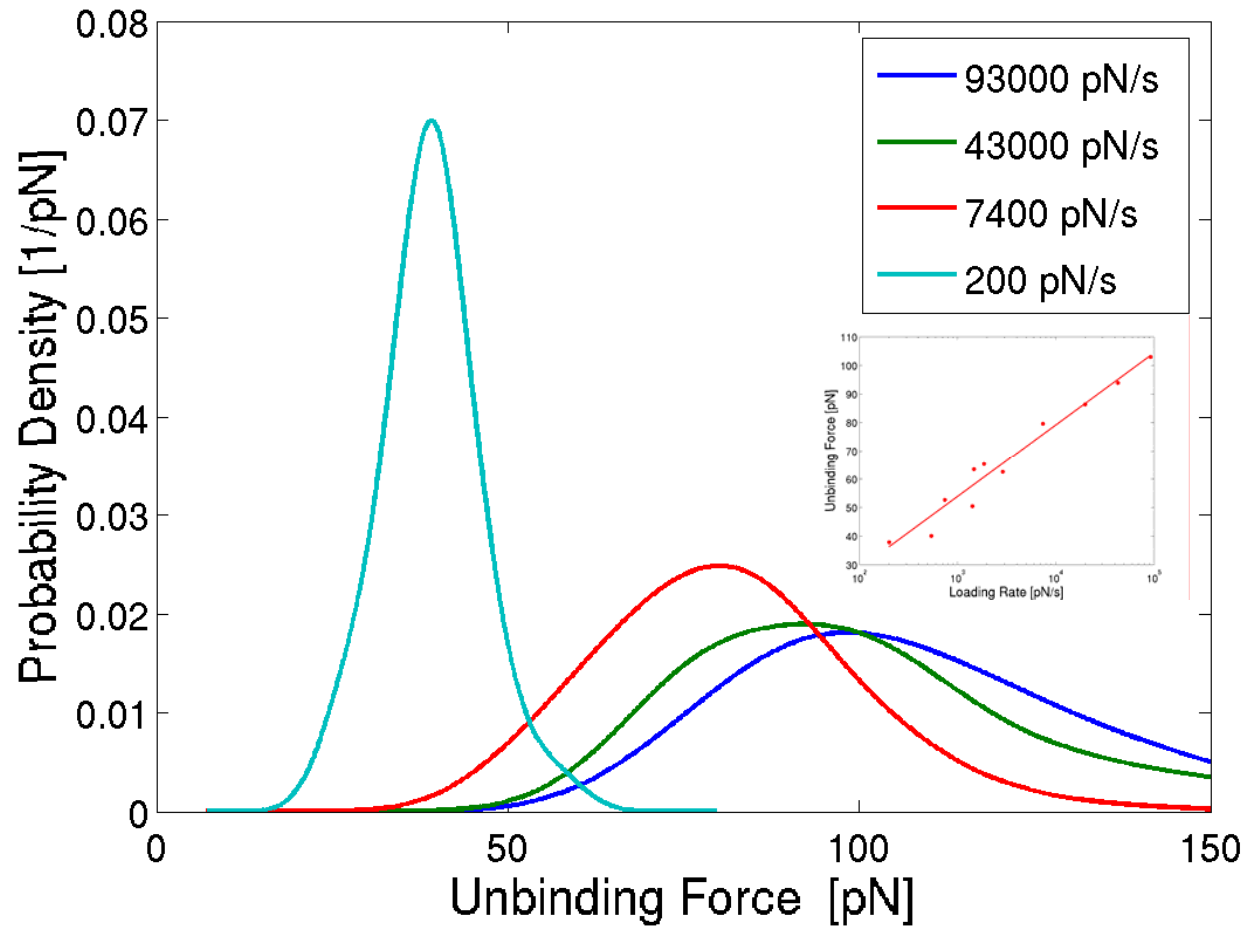

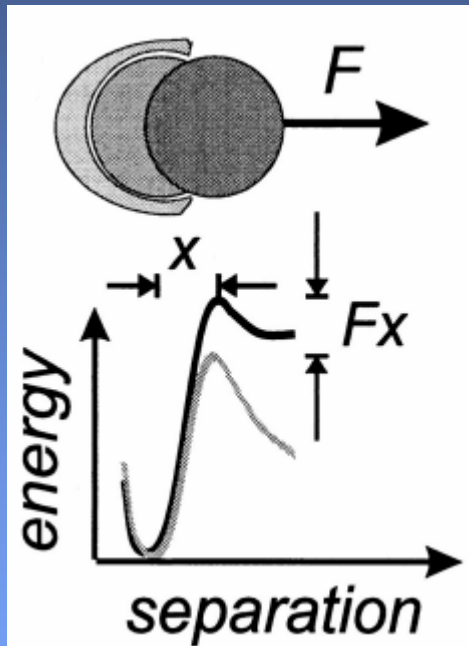

# Probability Density

# Theory of Force-Spectroscopy

## Master Equation

$$dN(t)/dt = -k_d(r,t)N(t)$$

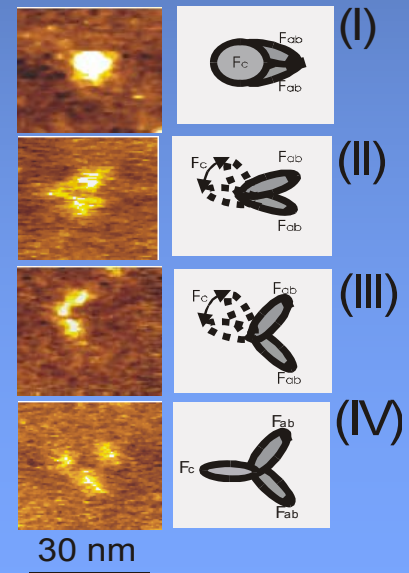

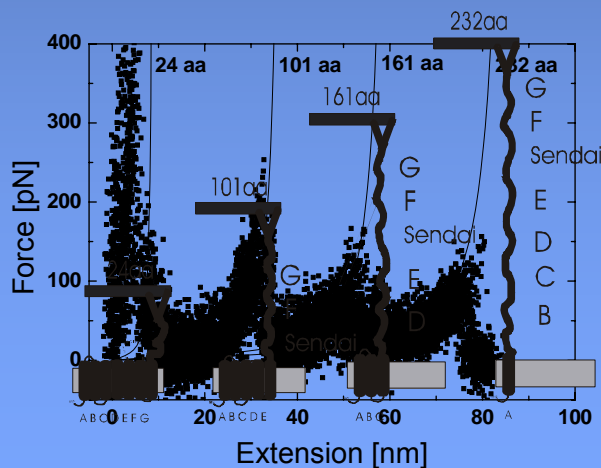

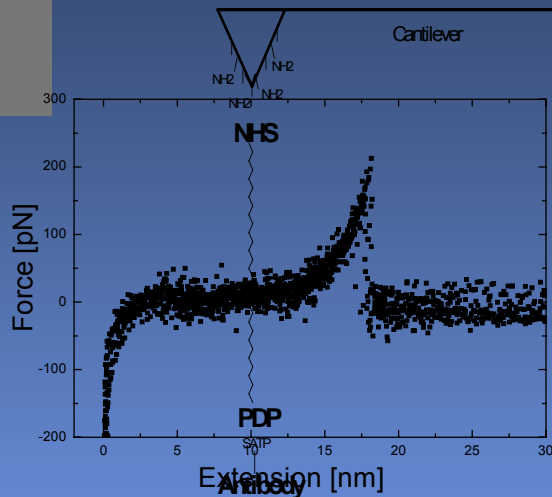

## Boltzmann Ansatz

$$k_d(F) = k_d(0) e^{Fx/kT}$$

$$F^*(r) = k_B T / x_\beta \cdot \ln(r \cdot x_\beta / k_{\text{off}} \cdot k_B T)$$

# Molecular Complexes & Forces

# Human Rhinovirus

# Substructure of RNA

# Application to Chromatin

Topography

Recognition

mmtv chromatin/anti-histone H3 on tip

# Recognition is specific

Anti Histone H3 on  
non-acetylated  
MMTV

+ 30µg/ml BSA  
• No blocking

+ 50µg/ml  
ARTKQTARKSTGGKAPRKQLC  
(aa 1-20 of H3)

# Accuracy and Repeatability

*Green = 'hit'*

*Blue = 'miss'*

*Red = 'false hit'*

*Arrows = change on rescan*

*first scan*

*96±1% (false 1.1%±0.1%)*

*second scan*

*92±2%, (false 2.8%±0.5)*

# Distribution of trans-interacting VE-cadherins on MyEnd surface

Microvascular **e**ndothelial cell line from mouse **m**yocardium (**MyEnd**)

**V**ascular **e**ndothelial cadherin (**c**alcium-**d**ependent **a**dherent protein) (**VE-cadherin**)

Selective adhesion between cells    Immunofluorescence labeling of VE-cadherin

(Baumgartner W et al., *Histochem Cell Biol*, 2004)

Single molecule fluorescence imaging

$$\frac{5 \times 10^3}{\mu\text{m}^2} \text{ cis dimers}$$

(Baumgartner W et al, *J Cell Sci*, 2003)

- Lateral resolution is not better than 200 nm
- No information about topography

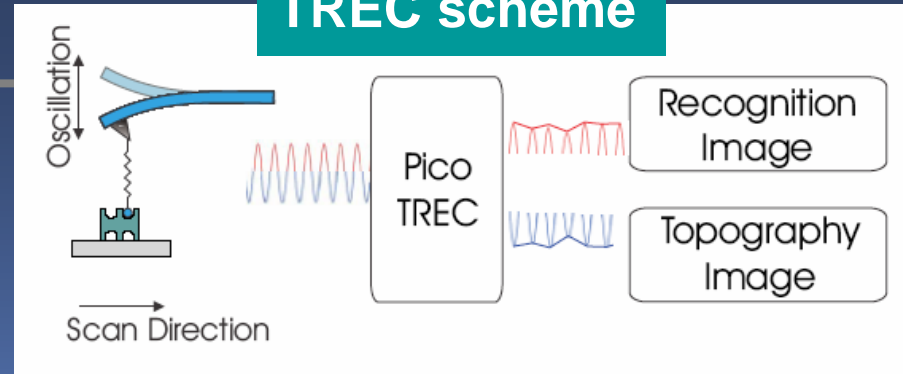

# AFM Simultaneous Topography and RECOgnition (TREC) TECHNIQUE

## MAC Mode

- Good for “soft” samples (proteins, cells, etc.)
  - Gentle imaging technique
  - Physiological environment
- **Requirement for TREC**

## TREC scheme

## model system: avidin-biotin

**AFM tip:**  
**biotin via PEG linker**  
**mica surface:**  
**avidin molecules**

**blocking with streptavidin**

## topography

## recognition

# Morphology of MyEnd cells

single live cell

AFM PicoPlus; Large scanner; Cantilever: tip E ( $\nu \approx 7,5$  kHz); HBSS at RT

Contact mode

Mac mode

Lateral mobility of receptors on cell membrane

Fixation of cells!

# Morphology of MyEnd cells

fixed cells

fixation with glutaraldehyde

normal fixation in buffer

gentle fixation in medium  
(Oberleithner H. et al. Hypertension, 2004)

**Filamentous network at the cell cortex is mostly conserved!**

# Topography of gently fixed MyEnd cells

AFM-MAC mode

Transmission EM

cytoskeleton organisation

F-actin filaments

microtubules

(Heuser and Kirschner, JCB, 1980)

500 nm

250 nm

250 nm

# TREC on fixed MyEnd cells / VE-cadherin

AFM tip ( $\nu \sim 7.5$  kHz):  
VE-cadherin-Fc via PEG-linker

scan size:  $1.7\mu\text{m} \times 1.7\mu\text{m}$   
scan speed:  $\sim 3 \mu\text{m/s}$

recognition map

blocking with 5mM EDTA

300 nm

300 nm

# TREC on fixed MyEnd cells / VE-cadherin

recognition

topography

size of VE-cadherin's microdomains from ~ 30 nm to ~ 500 nm

+EDTA

300 nm

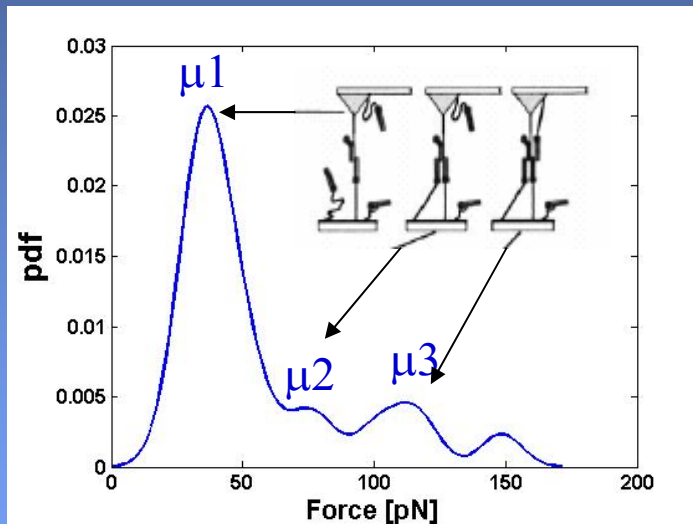

300 nm

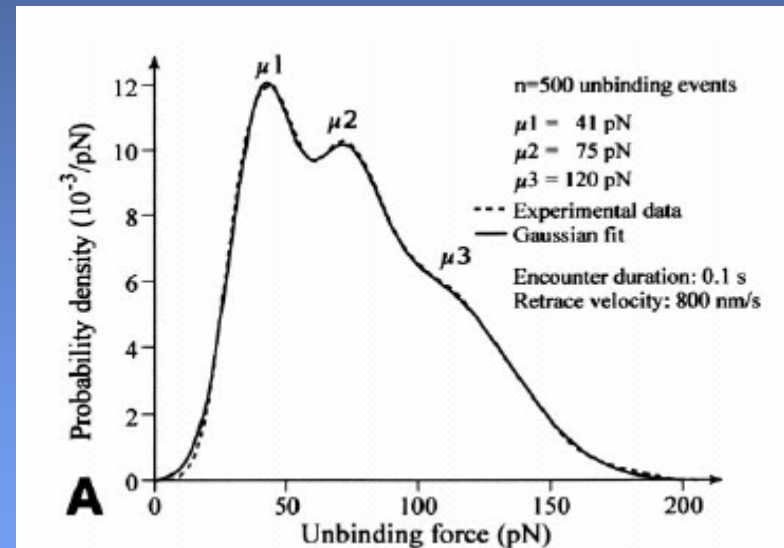

# Force measurements: VE-cadherin *cis*-dimers interaction

AFM tip:  
VE-cadherin-Fc  
via PEG-linker

MyEnd surface

VE-cadherin *cis*-dimers on mica

(Baumgartner W et al, PNAS, 2000)

# TREC on fixed MyEnd cells / Fibrinogen

## Specificity of fibrin(ogen) to endothelial cells

- VE-cadherin
- Integrin  $\alpha_v\beta_3$
- Intercellular adhesion molecule (ICAM-1)

topography

recognition

force distribution

# Summary

---

- MacMode Imaging under Physiological Conditions
- Single Molecule Recognition Force Spectroscopy
- Simultaneous Mapping of Topography and Molecular Recognition
- Nanometer Lateral Resolution at fast Acquisition Rates
