By completing the BJT Lab in ABACUS - Assembly of Basic Applications for Coordinated Understanding of Semiconductors, users will be able to understand a) BJT (Bipolar Junction Transistor) operation (npn and pnp type) in Common Emitter and Common Base modes, and b) the concept of early voltage, base width modulation and Gummel Plot. Users will also learn how to design and study their own BJT structures.

The specific objectives of the BJT Lab are:
Recommended Reading

Users who are new to the operation of BJT should consult the following resources:

Demo

BJT Lab: First-Time User Guide

Theoretical Descriptions

* [Tutorial_PADRE_Simulation_Tools.pdf](tutorial) (tutorial)

* [ECE 606 Lecture 27: Introduction to Bipolar Transistors](ECE 606 Lecture 27: Introduction to Bipolar Transistors) (Graduate level)

* [ECE 606 Lecture 28: BJT Design I](ECE 606 Lecture 28: BJT Design I) (Graduate level)
* ECE 606 Lecture 29: BJT Design II (Graduate level)

* BJT Operation Description

**Tool Verification**

* Verification of the Validity of the BJT Tool

**Examples**

1. BJT Lab Worked Out Problem 1
2. BJT Lab Worked Out Problem 2

**Exercises and Homework Assignments**

1. BJT Problems and PADRE Exercise
2. BJT - Simulation Exercise
3. Homework Exercise on Bipolar Junction Transistors

**Solutions to Exercises**

Solutions are provided only to instructors!

**Evaluation**

ABACUS: Test for BJT lab Tool

**Challenge**

BJT Lab - Amplifier
