

NCN Students

Network for Computational Nanotechnology (NCN) is a National Science Foundation (NSF) gateway and research network with a mission to enable education and research in nanoscience for nanotechnology applications. NCN currently focuses on nanoelectronics, nanoelectromechanics, nanomaterials, nanophotonics, and nanodevices for biology and medicine, as well as other key areas.

This page is meant for NCN students from all nodes and carries the latest news and information about what is happening at each node and also provides a forum for interaction and discussion among the student leadership and the students across nodes. For Purdue specific activities, visit [this page](#).
